Guide Book

22nd Cross Straits Symposium on

Energy and Environmental Science and Technology (22nd CSS-EEST)

Date: December 2nd (Wed.) — 3rd (Thu.), 2020

22nd CSS-EEST will be held online using the "ZOOM Video Communications" software due to COVID-19 pandemic.

Organized by	**Interdisciplinary Graduate School of Engineering Sciences (IGSES), Kyushu University, Japan**
Co-organized by	**Pusan National University, Korea** **Shanghai Jiao Tong University, China**

九州大学 KYUSHU UNIVERSITY　부산대학교 PUSAN NATIONAL UNIVERSITY　上海交通大學 SHANGHAI JIAO TONG UNIVERSITY

Welcome Message

Dear Delegates,

On behalf of the Organizing Committee of 22nd CSS-EEST (The 22nd Cross Straits Symposium on Energy and Environmental Science and Technology), I would like to warmly welcome you to this symposium.

22nd CSS-EEST will be held online using the Zoom Video Communications software due to the coronavirus (COVID-19) pandemic. Holding the symposium online for the first time is no doubt an exciting challenge for us all. The drastic measures that have had to be taken to combat COVID-19 have at least provided us with the opportunity to rethink how this symposium is promoted and organized. I therefore trust that it will provide an excellent platform for all delegates and presenters to obtain valuable information from the varied presentations on state-of-the-art science and technology in the fields of materials, energy, and the environment.

Holding the symposium online will unfortunately mean missing out on many of the benefits of a traditional conference, such as meeting old acquaintances and making new ones face-to-face at the welcome party, banquet and in between presentations. However, the core content remains unchanged, as we will again focus primarily on the three research fields of materials, energy, and the environment. I also hope that you will take advantage of the online tools available to network with other participants before, after, and during the presentations. At the very least, I hope that this symposium inspires you with new ideas for further research directions and collaborations.

Finally, I would like to express my deep appreciation to all presenters for joining us and the organizing committee of KU, PNU, and SJTU for their contributions and efforts in ensuring a successful symposium.

Welcome to 22nd CSS-EEST and I hope you have an enjoyable time!

Jang

Byung-Koog JANG, Professor

Introduction to CSS-EEST

In 1998, our graduate school (*1, hereafter IGSES) proposed to the Pusan National University (PNU) and the Pohang University of Science and Technology (POSTECH) that a forum for students to interact with one another by “presenting research that integrates materials, energy and the environment in English” be established. The two schools, PNU and POSTECH, were chosen because of their long-standing relationship (*2) with IGSES and relative proximity to Fukuoka. As IGSES bases its research and education on the three pillars of “Materials, Energy and Environment”, establishing the forum was the incarnation of its ethos of “Profound, Broad and Integrated”.

The first Cross Straits Symposium on Materials, Energy and Environmental Sciences (CSS), so named to convey our desire to deepen friendship across the straits between Kyushu/Tsushima and Tsushima/South Korea, was held in November 1999, at the Chikushi Campus under the sponsorship of IGSES. The subsequent symposiums were organized and held by each of respective schools on a rotation basis. In 2013, the symposium series evolved into the Cross Straits Symposium on Energy and Environmental Science and Technology (CSS-EEST) with participation from three countries, IGSES (Japan), PNU (Korea), and SJTU (Shanghai Jiao Tong University, PRC) (*3).

*1: The Graduate School of Interdisciplinary Engineering Sciences Research Department, Kyushu University (before March 2000)/ The Interdisciplinary Graduate School of Engineering Sciences (IGSES), Kyushu University (after April 2000).

*2: PNU as an intercollegiate exchange school and POSTECH is an interdepartmental exchange school. Since 2001, POSTECH has been an intercollegiate exchange school as well.

*3: Kyushu University, PNU, and SJTU are members of the Collaborative Graduate School Program for Global Human Resources Development in Energy and Environmental Science and Technology (the CAMPUS Asia EEST program).

General Information

Oral Presentation

- Keynote: 30 minutes (25 min presentation and 5min Q / A), 3 keynote speakers (Materials for KU, Environment for SJTU and Energy for PNU)
- Student: 15 minutes (approximately < 11 min presentation, 3 min Q / A + 1 min speaker change)
- All students' presentation will be divided into three research fields of Materials, Energy and Environment.

Pre-Check of ZOOM Access

- Date; 14:00 – 15:00 (Japanese local time), November 26th (Thu.) and 27th (Fri.)
- Only One-Time Access is OK in your convenient time.
  If you can't access on November 26th, please access on November 27th.
- Pre-check; Voice, Video and PPT sharing (1~2 min/student)
- ZOOM Access:

***Notice: If you access at ZOOM room, please change your name like [University-Position-Last Name-Number].**

Keynote Speakers #1 (KU)

Associate Professor, Andrew M. SPRING

Interdisciplinary Graduate School of Engineering Sciences,
Kyushu University
Email: spring.mark.andrew.284@m.kyushu-u.ac.jp
Tel: +81-92-583-8901
Website: https://springmarkandrew28.wixsite.com/polymerchemistry

Educational and Professional Career (Biography or CV)

- Master of Chemistry (MChem): University of Hull (UK) 2006
- PhD in Materials Chemistry: University of Manchester (UK) 2010
- Postdoctoral Research Associate: University of Florida (USA) 2010-2011
- Postdoctoral Research Associate: Institute of Materials Chemistry and Engineering (IMCE) Kyushu University (Japan) 2012-2014
- Assistant Professor: Green Asia Education Centre Kyushu University (Japan) 2014-2018
- Associate Professor: Department of Molecular and Material Science (MMS) Kyushu University (Japan) 2018-present

Research Interests

- Electro-optic Polymers
- Conjugated Polymers
- Carbon Nanotube Inks
- Functional Polymers for Wastewater Treatment

Lecture Title

- “Living Polymerizations for Engineering Applications”

Abstract

Well-controlled living polymerization mechanisms allow a fine tuning of bulk polymer properties to suit a range of high-tech engineering applications. Ring Opening Metathesis Polymerization (ROMP) is one of the most versatile and interesting of these techniques. The key requirement is that monomers must be cyclic alkenes which exhibit a large degree of ring strain. Typically, Grubbs catalysts are utilized to afford the narrow dispersity homopolymers, random copolymers, block copolymers and other more complex macromolecules.

Keynote Speakers #2 (SJTU)

Professor, Mingce LONG

School of Environmental Science and Engineering,
Shanghai Jiao Tong University,
Dongchuan Road No.800, Min Hang District,
Shanghai 200240, China

Educational and Professional Career (Biography or CV)

- Dr. Mingce Long received his Ph.D. degree in Environmental Engineering from Shanghai Jiao Tong University in 2007. He joined the same University in 2008 and was promoted to professor in 2018. He did research on photoelectrocatalysis at University of Erlangen-Nuernberg, and environmental photocatalysis at Rice University as a Visiting Scholar. He was a member of Chinese Chemical Society, Chines Society for Environmental Science, Chinese Materials Research Society and American Chemical Society. He has been a member of Editorial Board of Nano-Micro Letters since 2016, and a young member of Editorial Board of Chinese Journal of Catalysis since 2017. He has more than 80 peer-reviewed papers with more than 4400 SCI citations, and his H-index is 31. He coauthored one book chapter in English and one edited book in Chinese. He has been awarded as the "Tang Lixin Excellent Scholar" in 2018 and "Thermo Fisher Young Researcher Academic New Artist" in 2010.

Research Interests

1) Environmental functional materials
2) Environmental catalysis
3) Advanced oxidation technologies

Student List of Oral Presentation

Assistant Professor, Sang Min PARK

School of Mechanical Engineering,
Pusan National University
Email: sangmin.park@pusan.ac.kr
Tel: +82-51-510-2892

Educational and Professional Career (Biography or CV)

- Aug. 2012, B.S Degree in Mechanical Engineering, Pohang University of Science and Technology (POSTECH)
- Aug. 2014, M.S Degree in Mechanical Engineering, Pohang University of Science and Technology (POSTECH)
- Aug. 2018, Ph.D. Degree in Mechanical Engineering, Pohang University of Science and Technology (POSTECH)

Research Interests

- Advanced nano/microfabrication techniques (e.g. electrospinning, 3D printing)
- Nano-microfluidic device for energy and environmental fields
- Nanofiber scaffolds for tissue engineering and organ-on-a-chip

Lecture Title

- “Fabrication of a freestanding and patterned nanoporous junctions in a 3D micro-nanofluidic devices”

Abstract

In the field of micro-nanofluidics, a freestanding configuration of a nanoporous junction is highly demanded to increase the design flexibility of the microscale device and the interfacial area between the nanoporous junction and microchannels. This work reports direct fabrication and incorporation of a freestanding nanoporous junction in a microfluidic device. Electrolyte-assisted electrospinning process could fabricate a freestanding nanofiber membrane, and subsequently, the nanofiber membrane was impregnated with a nanoporous precursor material followed by a solidification process. Given that this process can readily control the geometry of the nanoporous junction, vertically stacked 3D micro-nanofluidic devices with complex configurations are easily achieved. To demonstrate the broad applicability of this process in various research fields, a reverse electrodialysis-based energy harvester and an ion concentration polarization-based preconcentrator are produced. Besides, 3D multiplexed and multi-stacked preconcentrators accumulate multiple preconcentrated plugs that can increase the operating sample volume and the degree of freedom of handling.

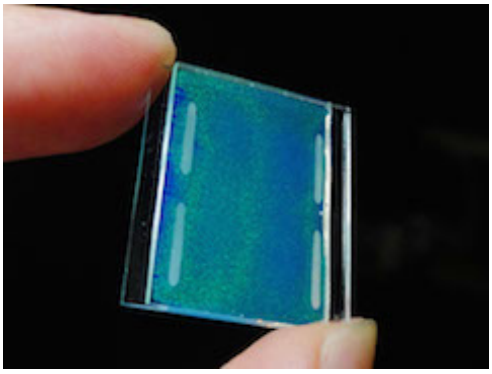
E-23	Jinsub KIM	PNU	FLOW DISTRIBUTION CHARACTERISTICS ACCORDING TO VARIATION OF THE FLOW RESISTANCE IN THE HEADER SUPPLYING THE WORKING FLUID TO MULTIPLE FAN COIL UNITS	172
E-24	Sitti Subaedah SAHABUDDIN	KU	ENHANCEMENT OF GROWTH AND CYTOKINE PRODUCTION OF EL-4 T-CELL BY IRRADIATION THE ATMOSPHERIC OXYGEN PLASMA	174
E-25	Keisuke IWASAKI	KU	PRELIMINARY RESEARCH ON MULTIPLE 3D WAVEGUIDE FABRICATION	176
E-26	Heerim SEO	PNU	NUMERICAL STUDY OF AIR FLOWS IN HUMAN UPPER AIRWAY FOR FREE FLAP RECONSTRUCTION FOLLOWING RESECTION SURGERY IN ORAL CANCER PATIENTS	178
Environment				
EN-17	Chenyi ZHANG	SJTU	No submission (Cancelled)	180
EN-18	Jindi GUO	KU	GIS-AIDED EVALUATION OF THE IMPACT OF LAND-USE CHANGE ON ENVIRONMENTAL VARIATION	181
EN-19	Suyeon LEE	PNU	Investigation on the flame retardancy mechanism of transparent cellulose nanopaper fabricated by vacuum assisted layer-by-layer process	183

Introduction to Chikushi Campus, Kyushu University

Interdisciplinary Graduate School of Engineering and Science (IGSES) in Kyushu University

The Interdisciplinary Graduate School of Engineering and Sciences (IGSES) consists of 5 departments, and their focus is divided across the three main fields, namely, materials, energy, and the environment. All graduate students of IGSES belong to one of these five departments and conduct their research under the supervision of professors of IGSES.

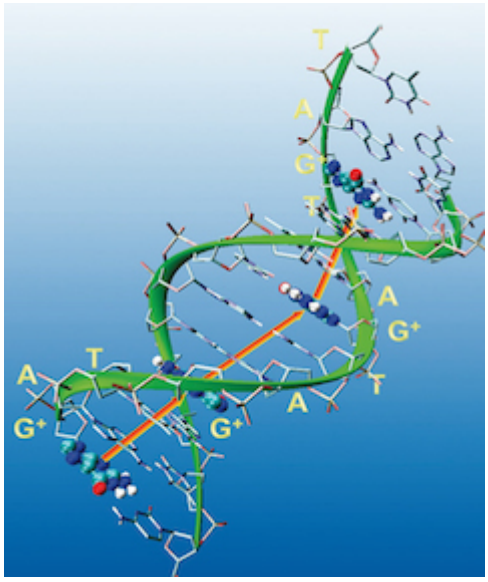
1. Applied Science for Electronics and Materials (ASEM)



Scientific technology that utilizes the quantum effect has advanced rapidly and the base of advanced scientific technology typified by electronics is ever-expanding. Advanced materials and devices, and underlying scientific technology of their processes are sought for the resolution of the various issues of modern society, and the development of a society with harmony between man and nature in the 21st Century.

This major is for the training of engineers and researchers who can profoundly and comprehensively understand the synthesis, the structure, the property, and the value of materials, the integration technology of the production process and system of fine devices, and the applied technology of light, plasma and electromagnetic fields by organically combining the understanding at a micro and macro level.

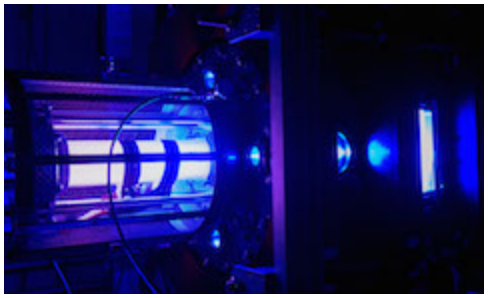
2. Molecular and Material Science (MMS)



The Department of Molecular and Material Sciences (MMS) aims to provide comprehensive education and research by integrating the disciplines of physics, materials, and chemistry based on an overall view of science and engineering related to materials, and to train the next-generation of researchers and highly specialized engineers.

In the laboratories, the original objectives of materials science are deeply explored by measuring and analyzing higher-order structures. Furthermore, unique reactions and material functions are also explored and new functional materials are developed. The systemization of a new materials science in order to ensure prosperous life activities on earth is also promoted.

3. Advanced Energy Engineering Science (AEES)



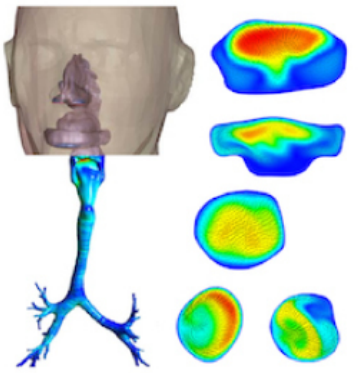
Now that we have entered the 21st Century, the issues of energy on a global scale are about to face a major turning point. The population growth and the boom in energy consumption due to the improvement of living standards indicate that the progress of human civilization must face challenges in the not-so-distance future, if it continues to depend on fossil resource, and there is an urgent need for the development of an extensive energy source that will support a wide range of daily activities based on environmental conservation.

The Department of Advanced Energy Engineering Science (AEES) is training researchers and engineers with a broad perspective and creative ability who would undertake a leadership role for the resolution of the energy issues of the 21st Century by carrying out the development of advanced nuclear energy that utilizes nuclear fusion and fission, the development of advanced energy such as hydrogen and solar energy for multiple uses, and interdisciplinary education and research on its basic theory.

Introduction to Chikushi Campus, Kyushu University

4. Energy and Environmental Engineering (EEE)

The department of Energy and Environmental Engineering (EEE) was established in 1998 as a cross-disciplinary graduate school of mechanical engineering and building environmental engineering aiming for the development of human resources to address environmental issues and energy conservation as engineers in the fields of industry, government, and academia.



Simulation of Human Respiratory Airflow provided by Prof.Ito

In spite of the diversity of research activity of each laboratory, EEE has constructed a well-organized education unit for more than a decade on a basis of common academic disciplines, such as fluid dynamics, thermo dynamics, heat and mass transfer engineering, and other related mathematics.

5. Earth System Science and Technology (ESST)

The study of the department of Earth System Science and Technology (ESST) is an integrated academic area based on natural fluid science, which is common in both geo-environmental science for acquiring, analyzing and measuring information on the universe, the atmosphere and the sea for working out the mechanism of climate change and environmental conservation, and atmospheric and marine technologies for an orderly development of the earth's undeveloped resources and space. The department was founded for the purpose of establishing measures against the greatest crisis since the beginning of our species faced by the air and sea that are maintaining our life-environment, and for training human resources.
