The Period of GA Korean excursion was from 3rd to 6th of February 2016. In this excursion, we visited Yonsei University at Seoul, and participated the joint symposium with them.

On 4th February, the 1st day of the symposium, professors from Yonsei University as well as Kyushu University made presentation about their research. They explained the current trend of research area respectively. After the symposium, professors of Yonsei University took us to their laboratories. During the laboratory tour, we visited some laboratories, including electrochemical laboratory, chemical laboratory and their measurement room.

In the 2nd day of the symposium, students from Yonsei University as well as Kyushu University made presentation about their research. It was the first time for most 1st year students to make a presentation in international symposium. During the lunch break, following the student guide, we have visited the main campus of Yonsei University, open space and library.

On 6th February, we visited the National Museum of Korea, which exhibited Korea’s historical assets from ancient times to the modern era. This largest and fascinating museum told us a lot of things on Korean culture, which has long closely interacted with Japanese culture for over two thousand years.

We are sure that throughout the tour the GA student got an excellent learning experience.

Lastly, we really appreciate the great support Yonsei University give us despite our request on short notice.
